

# Controls, instrumentation and drives strengthened

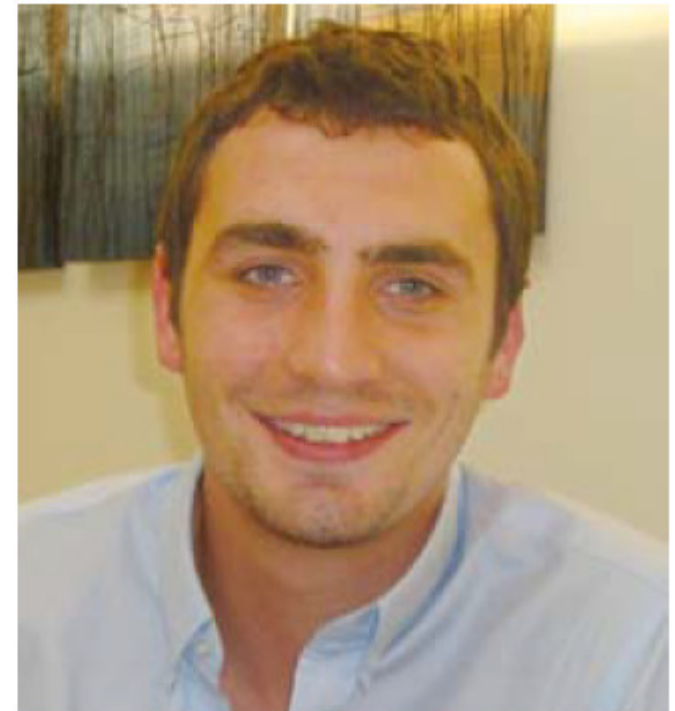

Shane O'Sullivan is the latest addition to the Walmsleys UK team as the company expands and strengthens its controls, instrumentation and drives engineering capabilities.

Although Shane is relatively new to the paper industry, he brings with him a wealth of experience from working on various electrical processes on major projects within steel manufacturing, renewable energy power stations and deep sea oil and gas projects.

Andrew Wilkinson, Operations Director at Walmsleys told BPMNews that Shane's talents were introduced to the company whilst he was working on

its recent sub-sea, cable winding, pipe project in the north of Scotland. Said Andrew, "I think Shane enjoyed working with our young mechanical engineers on this exciting sub-sea development and the fact that he lives close to our offices in Lancashire, UK made for a perfect fit in strengthening these areas."

Shane has an honours degree in electrical and electronic engineering from Sheffield Hallam University, UK and will join the project teams on the two complete paper machine installations and start-ups that Walmsleys will execute throughout 2012 and early 2013.
